

Non-Destructive Inspection of Steel Wire Ropes

Saga Subsea have acquired a larger package of MRT Equipment making us one of Europe`s largest suppliers of MRT services to the Offshore and Maritime Industry.

Wire ropes deteriorate during operations and should be inspected periodically and discarded at the appropriate time. This can avoid the cost of premature discarding of ropes and also prevent critical errors due high abrasion and corrosion.

MH 22-45

Magnetic head MH 22-45 Have non-detachable sensors and a set of sleeves/inserts for different wire diameters.

Diameters of ropes _____ from 22 – 45mm

Dimensions _____ 295x185x195mm

Weight _____ 11.1kg

Inspection speed _____ from 0 to 4 m/s

MH 40-64

Magnetic head MH 40-64 Have non-detachable sensors and a set of sleeves/inserts for different wire diameters.

Diameters of ropes _____ from 40 – 64mm

Dimensions _____ 330x235x195mm

Weight _____ 15.0kg

Inspection speed _____ from 0 to 2 m/s

MH 60-85

Magnetic head MH 60-85 Have detachable sensors and a set of sleeves/inserts for different wire diameters.

Diameters of ropes _____ from 60 – 85mm

Dimensions _____ 690x526x288mm

Weight _____ 59.0kg

Inspection speed _____ from 0.2 to 1.5 m/s

MH 80-120/MH100-150

Magnetic head MH 80-120 and MH 100-150 Have detachable sensors and a set of sleeves/inserts for different wire diameters.

Diameters of ropes:

MH80-120 _____ from 80 – 120mm

MH100-150 _____ from 100 – 150mm

Dimensions:

MH 80-120 _____ 895x520x440mm

MH100-150 _____ 950x550x490mm

Weight:

MH 80-120 _____ 163.0kg

MH100-150 _____ 220.0kg

Inspection speed _____ from 0.2 to 1.5 m/s

From our Offices in Norway we can send the equipment and personnel all over the world to perform regular inspections of wire ropes that meet the requirements of:

- **ASTM E1571**
- **ISO 4309**
- **EN 12927-8**
- **IMCA LR 004**
- **IMCA HSSE 023**
- **IMCA M 197**
